Introduction

When submitting referrals and authorizations, providers need to list the appropriate referral codes and profiles on their requests. When selecting the appropriate profile, **please do not make any preset changes to the CPT codes included within the profile**. If additional codes are needed, simply add a new service line with the appropriate code(s), rather than modifying the existing profile. This does not apply to the generic profiles, as those are designed to require CPT codes to be entered manually.

This guide lists each profile code, its description, what procedure codes it includes, how long that profile code is valid for once approved, and what services and situations that profile code applies to. Use this list to determine the correct profile for a referral or authorization.
